

PREPARED FOR STORAGEKEYS

Progress Report

Website, SEO, speed and development work delivered from 1 October to 5 November 2026.

WEBSITE	REPORT DATE	PREPARED BY
storagekeys.com	5 November 2026	MAIT

SUMMARY

A month of real progress

From 1 October to 5 November 2026, StorageKeys gained a new brand-led website, a much bigger search presence, a faster home page, and stronger payments and apps.

22
new website pages live for Dubai, Sharjah and specialist storage

24
new guides published on the blog, each with images and SEO

96
Google PageSpeed score for the home page on mobile

150+
individual tasks completed across website, SEO and apps

What this means for StorageKeys

- **A website that looks like your brand.** Every public page now follows the brand book: colours, type, icons, patterns and spacing.
- **Much more to find on Google.** Dedicated pages now cover each city, each main service and specialist needs such as boat, art and pharmaceutical storage.
- **A home page that opens fast.** The first impression is now quick and steady on phones and computers, scoring 96 on mobile and 94 on desktop.
- **Easier booking and enquiries.** The booking and reservation pages were rebuilt, and each enquiry now records the page it came from.
- **Payments that take care of themselves.** Card payments are confirmed automatically, and recurring invoices can charge saved cards where the customer has agreed.
- **Stronger mobile apps.** Customers and employees can delete their accounts in line with app store requirements, and employees can sign up for admin approval.

What is in this report

Speed
Home page scores, load times and what changed to get there.

SEO
New pages, technical SEO, blog content and how it all links together.

Development
Website redesign, booking, payments, admin tools and mobile apps.

This report covers work from 1 October to 5 November 2026. Facts about the live site were checked on storagekeys.com on 5 November 2026.

TIMELINE

How the month unfolded

Work moved in clear stages, from new pages and foundations through to brand, payments, speed and apps.

1 – 8 October

Foundations and specialist pages

Website audit, Google Analytics and Tag Manager set up, new grouped Storage Options menu. Art, Equipment, Construction, Boat, Pharmaceutical, Vehicle, Short Term and Long Term Storage pages went live, and the Office Storage page was restored.

12 – 15 October

Automatic sitemap and blog publishing

The sitemap now updates itself when a page or post goes live. Blog images, SEO details and structured data now save correctly when posts are published. The employee app can now show Punch Out correctly.

19 – 20 October

Brand rollout begins

Brand colours, buttons and icons applied across public pages. Booking, reservation, blog, shop and About Us pages rebuilt, new header photos added, and App Store and Google Play badges placed in the footer.

21 October

Automatic payments

Automatic card payment confirmation, shop order settlement, recurring invoice charging and a redesigned admin dashboard.

26 – 27 October

Design feedback and internal linking

Home page and Storage Options rebuilt to the agreed design, all pages checked from 1280px down to 360px wide, Figtree chosen as the web font, and service and industry pages linked together.

28 October

Dubai and Sharjah location pages

14 new location pages with structured data, a two-city Locations menu and footer links.

28 – 30 October

Home page speed programme

Layout movement removed, images and scripts optimised, and the mobile score raised to the mid-90s.

29 – 30 October

App account features

Account deletion for customer and employee apps, plus employee sign-up with admin approval.

1 – 3 November

Content and accuracy

Latest guide published, and the privacy policy corrected to reflect the two facilities in Dubai and Sharjah.

SPEED

Home page speed

Green across the board. The home page now scores in Google's top band on both phones and computers.

Mobile: Google PageSpeed Insights

Desktop: Google PageSpeed Insights

Load times, measured by Google

What it measures	Mobile	Desktop	Google's "good" mark
First content appears (FCP)	1.1 s	0.5 s	1.8 s or less
Main content visible (LCP)	2.1 s	1.2 s	2.5 s or less
Page stays still while loading (CLS)	0	0	0.1 or less
Time the page is blocked (TBT)	0 ms	0 ms	200 ms or less
Page looks complete (Speed Index)	3.2 s	2.4 s	3.4 s or less (mobile)

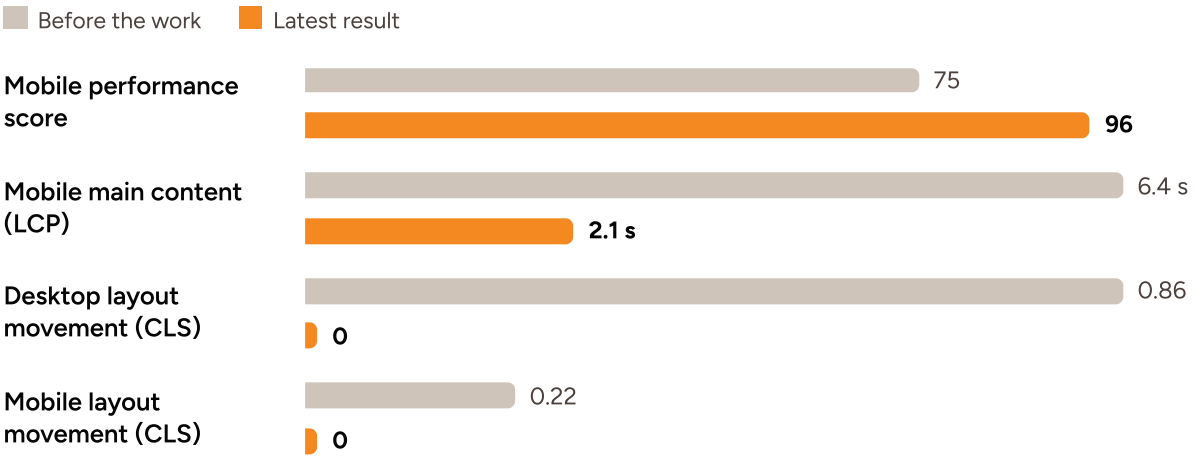

Scores: PageSpeed Insights report for https://storagekeys.com/, 5 November 2026, 11:57 AM. Load times: repeat test the same day at 12:01 PM, which scored 98 on mobile and 92 on desktop. Scores naturally move a few points between tests. These are Google's controlled lab tests of the home page.

SPEED

What changed on the home page

Most of this work was completed between 28 and 30 October. A page that opens quickly and holds still makes a strong first impression, especially on a phone.

Before and after

"Before" figures come from Lighthouse tests logged during the work on 29–30 October 2026. Latest results come from PageSpeed Insights on 5 November 2026. Lower is better for LCP and CLS.

What we did

Essential styling loads first

The styles for the first screen now arrive with the page, so nothing waits on extra files.

Lighter hero images

A dedicated 56 KB mobile hero, and the desktop hero cut from 235 KB to 119 KB. The hero is also requested first.

Images load when needed

Images further down the page wait until the visitor scrolls near them. One unneeded 93 KB image was removed from the first load.

Extras wait for the visitor

reCAPTCHA, Google tags and the WhatsApp widget load when the visitor first interacts with the page.

Our own font delivery

The Figtree font is now served from your own server with a matched backup font, so text no longer jumps.

Nothing jumps

The header, icons and hero have reserved sizes before they appear, so buttons stay where visitors expect them.

SEO

22 new pages for Google to find

Each page targets a specific search, such as warehouse storage in Dubai or furniture storage in Sharjah.

Location pages: 14 pages

Page	Dubai	Sharjah
Self Storage (city page)	/self-storage-dubai	/self-storage-sharjah
Warehouse Storage	/warehouse-storage-dubai	/warehouse-storage-sharjah
Personal Storage	/personal-storage-dubai	/personal-storage-sharjah
Furniture Storage	/furniture-storage-dubai	/furniture-storage-sharjah
Appliance Storage	/appliance-storage-dubai	/appliance-storage-sharjah
Luggage Storage	/luggage-storage-dubai	/luggage-storage-sharjah
Box Storage	/box-storage-dubai	/box-storage-sharjah

City pages have their own intro, overview, FAQs and meta details, and the service pages link to each other in both cities.

Specialist and industry pages: 5 pages

Art, Equipment, Construction, Boat and Pharmaceutical Storage, each with about 1,300 words written around what that customer needs.

Storage plan pages: 3 pages

Vehicle, Short Term and Long Term Storage, each with an interactive tool, five FAQs and a quote form.

Vehicle Storage
Vehicle configurator and an indoor versus outdoor comparison.

Short Term Storage
Period planner and clear how-it-works steps.

Long Term Storage
Item sorter plus furniture and business sections.

Also improved

- **Office Storage** fixed after a page-not-found error, then rebuilt on the shared service page layout.
- **Personal Storage** heading now reflects both Dubai and Sharjah.
- **Storage Options** mega menu and a two-city **Locations** menu put these pages within easy reach.

SEO

The technical foundations

Behind the scenes, the site now gives search engines a clear and accurate picture of StorageKeys.

74
pages and posts in an automatic sitemap

100
PageSpeed SEO score for the home page

0
blog posts left unlinked from the rest of the site

Self-updating sitemap

New pages and blog posts now join sitemap.xml automatically, with no manual update. It currently lists 47 pages and 27 blog posts.

Structured data on location pages

Location pages describe the business to Google using SelfStorage, FAQ and Breadcrumb data, including address details.

Structured data on blog posts

Posts carry article and FAQ data, helping search engines understand what each guide covers.

Unique titles and descriptions

City and service pages each have their own search title and description, written for that page.

Internal linking

Service and industry pages now link to each other and to guides through a new Explore More section. An Industries footer column was added too.

Breadcrumbs and navigation

Location pages show their place in the site, and footer and contact page links lead straight to Dubai and Sharjah.

Enquiry tracking

Quote forms pre-select the storage type and tag each enquiry with the page it came from, showing which pages bring in leads.

Analytics in place

Google Analytics and Google Tag Manager are installed on public pages, ready to measure how visitors use the site.

What comes next for results

New pages take time to be crawled, indexed and ranked. With the foundations now in place, the next report will aim to add traffic, search queries and rankings from Google Analytics and Search Console.

SEO

24 new guides on the blog

The topics follow what customers ask at each stage, from moving house and renovating to business stock and document archiving.

27
guides live on the blog in total

0
thin posts or duplicate titles found in the content audit

328
internal links from blog posts to other pages and posts

All 27 posts were checked by the content audit for thin content, missing SEO details, duplicate titles and overlapping topics, with nothing flagged.

DEVELOPMENT

A website that matches the brand

The biggest visible change this month: the public website was brought into line with the StorageKeys brand book, page by page.

Brand system

Brand colours, gradients, line patterns and security, garage, delivery and tracking icons now run across the site. Older off-brand colours were replaced on every page.

Typography

Figtree, the closest web-licensed match to the brand font Capitana, is now used on every page.

Home page

Rebuilt to the agreed design with solutions cards, a service band, a booking card, a hero and a quote form. New sharp header photography added.

Header and footer

A clean floating header with clear buttons and an active-page marker. Footer now has organised service columns, locations and app download badges.

Storage Options, About, Shop, Blog

Each redesigned to the agreed layouts. Shop adds clickable box sizes and a Help Me Choose recommendation.

Works on every screen

All pages were tested from 1280px down to 360px, with overflow and mobile layout issues fixed.

Booking and reservation

- **Booking page rebuilt** with brand-styled filter cards and a tidy two-per-row layout for available units.
- **Draggable size slider and visualizer** that updates immediately when a size is chosen, plus a restyled duration slider.
- **Available Units list** now fills with units from the selected area.
- **Reservation page rebuilt** with a clear summary of city, area, size, level and storage type.
- **Contact Us** now has Dubai and Sharjah location cards with links through to each city page.

Consistent everywhere

Buttons, page widths, corner radius and section spacing now follow one standard, so every page feels like part of the same StorageKeys experience.

DEVELOPMENT

Payments and admin tools

Work behind the scenes that saves the team time and makes billing more dependable.

Payments and billing

Automatic payment confirmation

Card payments through N-Genius are now confirmed automatically by the payment gateway, with a reconciliation job as a backup check.

Recurring invoices

Due recurring invoices are generated automatically and can charge a saved card where the customer has given consent.

Failed charge alerts

The team is notified when a recurring charge fails, and every payment attempt is recorded.

Shop orders

Shop orders now settle through a dedicated flow, so payment status and order status stay in step.

The new payment and shop order flows are covered by automated tests.

Admin panel

Redesigned admin dashboard

A rebuilt dashboard gives the team a stronger view of day-to-day activity.

Faster invoicing

A searchable customer dropdown on Create Invoice, and tidier status badges on the invoice list.

Saved card management

Customer records now show the saved payment card, and the team can deactivate it from the admin panel.

Clearer order and invoice screens

Order and invoice views and printouts were updated to show the new payment information.

Publishing and site reliability

- **Blog publishing** now saves featured images, SEO details and structured data correctly.
- **Blog articles** display immediately on load. The same fix was applied to the Home, Business Storage and Warehouse Storage pages.
- **New location pages** were protected so that admin-created pages cannot take their addresses.
- **Privacy policy** corrected to reflect the two facilities in Dubai and Sharjah.

DEVELOPMENT

Mobile apps

The server side of the customer and employee apps gained new account features and more accurate attendance data.

Customer account deletion

Customers can delete their account with their password and a reason. The whole account is closed, its contacts are logged out, and deleted customers can no longer log in.

Employee account deletion

Employees can do the same. All of their logins are revoked and the reason is recorded.

Employee sign-up with approval

New employees can register from the app. Their account waits for admin approval before it can be used.

Correct attendance times

Punch-in and punch-out times now reach the app with their timezone, so staff see the correct local time. The app can also show Punch Out when a shift is open.

Why it matters

- **App store requirements:** Apple and Google both expect apps with accounts to offer account deletion in the app.
- **Useful feedback:** recorded deletion reasons show why people leave.
- **More downloads:** App Store and Google Play badges now appear in the website footer.
- **Smooth handover:** full documentation was written for the mobile developer, and the sign-up, approval, login and deletion flow was tested end to end.

Next for the apps

The server side is ready. The next step is updating the app's sign-up screen to show a "waiting for approval" message.

WHAT'S NEXT

Building on this momentum

The groundwork is done. The next stage is about measuring results and extending what is already working.

See the results

Connect Google Analytics and Search Console to reporting, so the next report can show traffic, search queries and rankings for the new pages.

Speed across more pages

Bring the methods that lifted the home page to the service, location and blog pages.

Better link previews

Add social sharing tags so links look great on WhatsApp, LinkedIn and Facebook.

More structured data

Add business details to the home page, as already done on the location pages.

Local presence

Review the Google Business Profiles for Dubai and Sharjah, along with reviews and UAE directory listings.

Keep publishing

Continue regular guides and link them to the new location and service pages.

App sign-up screen

Show the waiting for approval message, and add the Google Maps key for the app.

API security review

Tighten access rules and request limits on the app APIs as part of ongoing maintenance.

Thank you for your trust

StorageKeys now has a website that looks the part, opens fast and gives search engines far more to work with. We look forward to building on it together and showing you the results in the next report.

STORAGE KEYS™
